Steve Smith
Benton County WA

Comment on the Maiden Wind Project here in Benton and Yakima counties.

I feel that the wind machines which are being paid for by taxpayers and members of BPA is not cost effective and it is not a reliable source of power and I feel that it is a waste of our monies.

That is my comment. Thank you.

Just read an article on the editorial page of the Prosser paper that opposes the wind farm that is apparently being considered as been approved to be installed on Rattlesnake. What the author of the article is saying it is a get green power is not going to be economically feasible. It will be just an additional cost to us as consumers. I am definitely opposed to it. We should only be pursuing projects that are truly viable economically and not political and not someone's social agenda..
