1/04.01

Dear Mr. Grim,

I hope this reaches you in time – I got the public Hearing on 4/27 & 4/28 – if not I hope you will consider my comment. I read the following info from an e-mail from the Peace Center I belong to – all I can say is this is absolute & total madness & unbelievably thinking!! What are you all thinking? What is being proposed will do nothing to help heal or sustain the planet or its life forms which we are the stewards of!! We need to be conservators of life! So letting this waste potentially sustainable resources & actually increasing the potential for harm is not good for us or our future.

DOE and Livermore Lab plan to:
- **More than double the plutonium limit at the lab from 1,540 to 3,300 pounds.** *One microscopic particle of plutonium, if inhaled, can cause lung cancer and other diseases.*
- **Manufacture prototype plutonium bomb cores (pits) on site.** *The projected production of 150 - 900 bomb cores would exceed (annually) the combined nuclear arsenals of France and China.*
- **Heat plutonium and shoot multiple laser beams through the vapor cloud, in an attempt to create a nuclear explosion.** *This will increase hazards to workers and the environment.*
- **Manufacture tritium targets (radioactive fuel pellets).** *This will mean an increase the amount of tritium allowed to be used in any one room at Lawrence Livermore from the current limit of just over 3 grams to 30 grams (a nearly 10-fold increase). This will increase the amount of airborne radioactivity emanating from Livermore Lab. The Lab has a history of tritium accidents, spills and releases.*
- **Undertake a speedy return to full-scale nuclear testing.** *The plan calls for Livermore Lab to develop diagnostics to enhance the nation's readiness to conduct full-scale underground nuclear tests, a dangerous step back to the days of unrestrained nuclear testing.*
- **Import live anthrax, plague and other pathogens, co-locating a bio-warfare agent research facility with nuclear weapons.** *The plan proposes genetic modification and aerosol spraying with live anthrax, plague & other pathogens, which could weaken the international biological weapons treaty. It also poses an additional risk to workers, the public and the environment.*

There is already an increase in cancer rates around the Lab. Furthermore, the Lab sits on two earthquake faults.

Please, please, please do not encourage or allow this irresponsible agenda to happen!

Sincerely Lindsay Brooke

Browning, Virginia

Dear DOE:

Here is my comment on the draft Site-Wide Environmental Impact Statement on Livermore Lab operations over the next ten years. The SWEIS calls for major increases in nuclear weapons design and manufacture. New plutonium activities include: raising the inventory from 1,540 pounds to 3,300 pounds; tripling the amount "at risk" at one time; creating prototype bomb cores for a new "Modern Pit Facility;" fissioning plutonium in the NIF mega-laser; and, vaporizing plutonium oxide on-site to separate isotopes. The SWEIS also reveals plans to increase the "at risk" limit for radioactive tritium 10-fold.

1/01.01
2/04.01
3/07.01

I oppose these actions in the SWEIS that will increase nuclear proliferation and damage our environment. I call on you to analyze conversion of the Lab to peaceful purposes as an alternative.

Written Comment Form

Must be received on or before May 27, 2004.

I was present at the Public Hearing. Although you, Tom Grim, truly gave yourself in your very professional presentation, I
1/04.01 sincerely have to object strongly to the proposed draft. I deeply believe that after 59 years of US atmoic bombings of Hiroshima
2/32.02 and Nagasaki we would have learned its destructive power to human health and lives as well as to our planet upon which we depend for our survival.

There can be no excuses to warrant
3/02.01 continuing to develop new or modified or even stockpile old nuclear weapons – be it under the guise of home security or foreign deterent.
4/01.01 Nothing, nothing can justify what is being proposed. Moreover this undermines our agreements with other countries under the Nuclear Non-Proliferation Treaty and

Please use other side if more space is needed.

5/07.01 results in making our country weaker not stronger.

I stand with those who would like to see the Livermore Laboratory be converted into a laboratory for Civilian Research once the mess that presently exists is cleaned up. The monies need to be channeled into these two projects only: clean-up the present mess, and convert to research for the betterment of people.

Respectfully submitted,
