1 It is ludicrous to even
 consider adding more nuclear WASTE
 to what the DOE has not
 cleaned up as intended.
 2 Please-please stay out of
 our beautiful land. The
 people here are sincerely upset
 and shocked that our
 3 government is betraying it's
 citizens, it's own taxpayers.
 We have a right to say
 "no." We will fight
 4 this up with all justice.
 you have no right to try
 and convince us that this
 will do no harm. It is DANGEROUS!

1 I am opposed to any further
2 radioactive waste of any kind being
3 sent to Hanford. I want it
4 cleaned up and shut down. Transportation
5 in the gorge is not appropriate
for moving nuclear waste.
It is irresponsible to ship new
waste when current waste is
toxic and will (to our knowledge)
never be disposed of. Portland is a major
metropolitan area that is downriver from
Hanford and is far too populated to be put
at such great risk of accidents, not to mention
the numerous small communities.

I am opposed to any additional waste being shipped to the Hanford site. The Government & specifically the DOE is full of intelligent, compassionate people who are concerned for the ~~the~~ health of their families & fellow life forms. Please do quality work that reflects this! We are an abundantly rich country use our \$ wisely to creatively safely solve over this environmental health risk. I want the DOE

- to NOT ship any more waste to Hanford
- to redo the EIS using the CRCA template they agreed to
- to consider & disclose the impact of the waste already at the Hanford site.
- to study & disclose impacts of "burial site" on groundwater & to stop using soil trenches
- to consult with & act in the best interest of native tribes rights.

I travel the Gorge 5 days a week. The roads are dangerous

- There should be a compelling reason to ship any radioactive waste. Otherwise it shouldn't be moved.
- EIS should include detailed analysis of transportation issues.
- Hanford should not take on any more waste until existing toxic releases are mitigated.
- Waste should be stored in a manner that keeps it from leaching into the ground (something besides unlined trenches or 30 year liners!!)

1 | I have attended every public comment
meeting held here since I moved here in
1997. My opinion and the overwhelming
public opinion seems abundantly clear.
2 | We cannot allow additional waste to be
brought to Hanford until or if ever, the
existing waste cleanup has been completed.
The gall and arrogance of whoever thinks
the idea of further contaminating this
sensitive area is astounding. I will continue
3 | to hold my position & attend these
meetings. Clean it up. Save our planet.

DEAR MR. COLLINS,

I AM vehemently opposed to any proposal
that would perpetuate the use of HANFORD for
A RADIOACTIVE DUMP SITE - low level, high level
TRU - whatever.

The people of WA - OR states have fulfilled
our patriotic duty AND WE WANT OUT. We HAVE
BEEN left with the MOST CONTAMINATED PIECE of EARTH
in the Western hemisphere and we will not accept
any more waste being imported and processed at
HANFORD. The DOE MUST fulfill their promise
to the citizens of the Northwest and remain focused
on the clean-up of the HANFORD site and assess
the cumulative effects of the contamination.
TREATMENT AND STABILIZATION of the WASTES on SITE
MUST be PRIORITY ONE.

Thank you for your consideration.

1 I William R. Schneider would like
2 TO ENTER THIS STATEMENT INTO PUBLIC
3 RECORD. I STRONGLY BELIEVE THAT
4 BRINGING MORE NUCLEAR WASTE OF
5 ANY KIND TO THE HANFORD SITE IS A
6 VERY BAD IDEA. WE NEED TO FOLLOW
THE CRCIA ENVIRONMENTAL MODEL,
DO THE STUDIES ON THE EXISTING
WASTE, AND DEAL IN A RESPONSIBLE
MANNER TO ELIMINATE THE DANGER
TO THE RIVER AND ALL LIFE FORMS
THAT ARE ENDANGERED IN HARMS WAY FROM
IRRESPONSIBLE WASTE STORAGE.

I ALSO BELIEVE THAT AN INDEPENDENT
OVERSIGHT COMMITTEE (NOT FROM D.O.E.)
SHOULD PLAY A MAJOR ROLE IN DECISION
MAKING AND ASSESSMENT. (IT MAY BE YOUR CHILDREN
THAT ARE CONTAINING IT!)

1 I would like to state my opposition to adding
 2 any more waste nuclear, chemical or otherwise
 to the Hanford Nuclear Reservation. It is my
 belief nuclear waste should not be transported
 but stored on site at point of origin. In
 addition all Reactors should be phased out
 as fuel Rods reach the need for replacement.
 3 Electricity Produced by Nuclear facilities currently
 in production should be replaced by conservation
 New Engineering for efficiency and Alternative
 power sources such as microhydro, wind, solar
 or fuel cells

I AM DISGUSTED THAT WE ARE STILL DEALING WITH THE SAME HANFORD ISSUES THAT HAVE BEEN REARING THEIR HEAD FOR THE LAST FEW DECADES.

PLEASE HAND HANFORD OVER TO THE PRIVATE SECTOR SO SOMETHING HAPPENS! YOU ARE NOT GETTING THE JOB DONE. YOU DO NOT APPEAR TO CARE, OR YOU WOULD HAVE COME UP WITH AN ACCEPTABLE STRATEGY BY NOW.

YOU, WE, AND THE NATION ARE RUNNING OUT OF TIME. PLEASE GET OUT OF THE WAY. LET CAPABLE, SMART ACTION ORIENTED COMPANIES TAKE CARE OF BUSINESS.

THANK YOU,

PROUD CONSTITUENT OF HOOD RIVER COUNTY

1 THE EIS IS CLEARLY INCOMPLETE, AS IT
2 FAILS TO ANALYZE:
3 * ENDANGERED SPECIES
4 * TRANSPORT ACCIDENT POTENTIAL;
5 RESULTING IMPACT
6 * ECONOMIC IMPACT FROM
7 CONTINUED CONTAMINATION
8 * HEALTH EFFECTS
THESE OMISSIONS MAKE IT VERY DIFFICULT
TO RESPOND SUBSTANTIALLY. WHAT CAN BE
SAID IS THAT IF THE PROPOSAL IS TO USE
UNLINED TRENCHES, THIS IS UNACCEPTABLE.
ADDITIONALLY, THERE SHOULD BE NO TRANSPORT
FROM SITES CAPABLE OF DEALING WITH THEIR
OWN WASTE, AND HANFORD WA, NOT BE
THE BEST PLACE FOR THOSE WHO CAN.
NO MORE WASTE WITHOUT CLEANUP.

1 Obviously nuclear waste must be disposed of. If ~~we Oregonians accept it under current conditions~~ ^{being stored at Hanford & transported} ~~at Hanford~~ we risk our children's future and the future of our state over the long term.

2 We must insist on responsible waste management starting with existing facilities at Hanford.

3 We must be shown that the needs of Oregonians are dealt with by eliminating current contamination before considering expanding our risks to include more waste.

4 Moving waste through Oregon increases our risk in our valley in the short term even more. We say NO to shouldering any more of this burden than we already carry.

5

6 Note: Was this meeting advertised in local papers (The Observer)? If not, why not?

"No Action" Alternative

7 If we want improvements we have to accept 3 times what we already have.

8 Cleanup Hanford + find some place w/o a river to bury the rest.
9 End public comment 8-22-02
Decision 12-02

10 Defense contractors pay no clean up fee.
11 Analyze for direct impacts
12 Mitigating pr we already have

12 Real No Action Alternative

13 Onsite vs off site waste.
14 Appears that cost avoidance is primary concern
15 Human protection + cost to the environment.

16 Low level - No lined trenches planned
"Bounded" trenches planned.

17 EPA advises + makes public comment but has no authority.

18 Current issues
Ground water - like the current trenches
19 Impact on health + welfare of humans + animals
20 Freeway transportation
River

As a life-long resident of Union County, OR, I am deeply concerned about having nuclear wastes transported through & stored near here. I've seen terrible weather conditions that would pose serious hazards to trucks passing through on I 84. Also, the prevailing winds from the west tend to carry dust & other particulate matter from the west, the general direction of the transport route. Because of the hazards posed by the transport of "off site" waste I favor the "no-action" alternatives for the various waste types. Thank you

1 After 15 years of going to meetings, I'm still
 2 struck by consistent behaviors of USDOE + private
 3 agencies involved with Hanford. The LaGrande meeting
 4 was advertised in Portland + Pendleton papers, not LG.
 5 At every public hearing (I've attended many), no one ever
 6 says lets make more nuclear waste, and it goes on + on.
 7 Hanford is still a mess and it will become worse
 8 if this plan proceeds. Old issues continue; bad weather,
 9 safety issues, truck parking, unlined trenches,
 10 manipulative politics + profit motives, Columbia River
 + water table issues, distorted info, years of hiding
 info, etc. USDOE presents itself much better
 but I have lost faith in the agency, the process
 + what is put out by the staff because its
 manipulated for some political-financial goal,
 not to serve the environment or the people
 that come to these hearings

Re: Hanford nuclear waste

1 In the mid 60's I gave testimony at U.S. of Minn re proposed nuclear power generation. We were told, after two days of testimony, that you guys had it together & we weren't to worry. No consideration was given to our testimony/concerns.

2 From this I decided to be apolitical for nearly 30 years. So now I hear theres a waste problem? Need a depository?

I suggest you turn it into suppositories & shove it all up your arseholes. Should be enough for you!

Written testimony re: Hanford nuclear
depot as waste depository, suppository??!

I'm assuming you folks are simple
reincarnations of the folks from the energy
department who came to the Univ. of Minn
in the mid 60's to hear testimony."

2 These arrogant assholes thanked us for
voicing concerns & reassured us that
they had this shit together. We
weren't to worry and they did as they
pleased. I ~~decided~~ decided to spend my time
in the mountains & disconnect from ~~the~~ ^{you}
powers that be. But I'm not surprised you
boys have a problem. Oh dear, what to
do w/ all this waste?? How about makin'
~~the~~ it into suppositories & shove it up
government assholes?! Mary McCracken

I am concerned that DOE has failed to address the particular transportation issues pertaining to the region from Portland through the Columbia Gorge, I over the two major mountains passed on either side of La Grande. This area is very dangerous in the winter. The Overways are frequently impassable due to weather or accidents and are frequently closed (I've last winter). How will DOE guarantee the safety of residents in the case of an ~~acc~~ accident involving nuclear waste? What if a part of the Grande Ronde valley needed to be evacuated on impassable roads. What kinds of equipment & technicians are available in case of an emergency. What if →

It is unconscionable that the U.S. government persists in practices that endanger human life, indeed all life on earth.

It is extremely frightening to imagine these wastes being shipped through our communities; and it is extremely disrespectful of the Native American communities at or near Yucca Mountain to dump the most toxic materials ever created by humans near their home, spoiling their environment forever. Likewise, don't contaminate my home & our community.

I am not a scientist, but my understanding is that vitrification is the least environmentally destructive process proposed for "neutralizing" as much as possible these dangerous substances.

A monster has been created, and the solutions being proposed are not designed to protect life from ~~the~~ the aftereffects of this evil.

Please involve the public more in decisions that affect all life on earth.

I have been involved with Hanford issues for a short amount of time. I am appalled that you would even think about adding to a preexisting problem. Everything that I have heard ~~about~~ from the DOE doesn't even begin to put a small bandaid on the problems at Hanford. At this meeting in particular I do not understand why you sent such an uninformed representative to us from your office. I love Oregon and I love Washington, they are two of the most beautiful states in our country and I can't believe that you would risk our health, environment, and economy ~~to~~ by further damaging our beautiful river & everything else that is damaged in the process. I say No to what you are planning to do... cleanup the mess you already

You cannot simultaneously clean up Hanford and continue to import more waste at the same time! The govt. keeps cutting back on funds, and then coming up with plans to move dangerous radioactive materials (waste) onto the Hanford property. Will monies for clean up be moved to disposal of imported waste at the site? I fear that they will! Hanford already contains 2/3 of the nation's high-level nuclear waste and contaminated soils! With no lining of trenches this plan is a pipe dream - with liners there is no guarantee that these liners would still be intact in 20-30-50-100 years, at the very least! Stop this plan. Stop creating more nuclear/radioactive waste - then concentrate on cleaning up what we have already!
Robin Bee

I am a citizen of Hillsdale, Portland, Oregon, the N.W. USA and the world in ascending order of importance as related to nuclear waste. I am NOT a habitual protestor about any particular issue. I believe the DOE is working to solve some very serious waste issues and truly want you to be successful in that endeavor. We are all dependent upon your commitment ^{Collins} Michael & your dedication to creating solutions that work. Unfortunately it appears your agency has a very limited vision for solving a very complex problem.

I oppose the transfer and storage of additional nuclear waste at Hanford for the following reasons:

1. Hanford & DOE have not addressed or safely managed the waste currently stored there.
2. You haven't done your homework and present a half-baked solution to a growing problem. I would appreciate and the people of the US deserve a comprehensive solution that is well thought out and well executed. You cannot answer many very BASIC questions that arose this evening.
3. Transporting nuclear waste via truck is dangerous and exposes adjacent areas to an unacceptable level of risk.
4. You have no plan to reduce the upstream creation of waste, nor do you formally limit the potential amount that may be generated and delivered to Hanford.

1 | Dumping & Storage Practices today &
 2 | historically are inadequate & unacceptable.
 3 | Transport of waste has not had enough
 4 | risk assessment. Unlined trenches
 5 | should not be used. If dealing
 6 | with waste properly is deemed
 7 | too extensive then the action
 8 | should be to limit & phase out
 9 | generation of all levels of waste.
 10 | All costs should be factored in when
 11 | generating these wastes.

12 | Withdraw the SWEIS because it is
 13 | incomplete & inadequate. Additional
 14 | analysis of human & environmental
 15 | impacts, risk of ground water contamination,
 16 | transportation accidents, & costs is needed.

1 This SWEIS is so thoroughly flawed
 that I urge DOE to withdraw it and
 2 start over by analyzing all the impacts
 to human and environmental health,
 especially the risk from groundwater
 3 contamination and transportation accidents.
 The shortcuts the Bush administration
 is trying to implement are unacceptable,
 4 as is the "secret" plan to make receiving
 CH and RH-TRU from offsite generators a
 priority over clean up of existing wastes
 according to the Tri Party Agreement. These
 5 priorities are backwards. Clean up must
 occur before anymore wastes are accepted.

1 Here we are again. Another citizens' meeting where the
2 public overwhelming weighs in against 1) more waste to Hanford,
3 2) transportation of wastes thru Or. 3) transportation of wastes
4 to Nevada 4) lack of real clean up of existing tanks + fields,
5 5) waste of millions of dollars.

6 For some reason DOE still thinks Hanford, Wa, is still
7 the end of some secret corner of the country where it won't
8 be seen or found again. Trucking this much waste will
9 result in some form of a disaster. Spending the money necessary
to stabilize waste where it now lays or is being produced
will mitigate this impending disaster. I encourage:

Lined trenches (with lead)
More technology to better handle stored waste at Hanford.
Don't treat LLW as if it were yesterday's coffee grounds.

And, I've yet to understand how one "treats" TAW.

1 I attended the Public Meeting on Hanford Tuesday July 30, 2002.
 2 I knew very little about the situation before the meeting. I
 3 found the meeting extremely informative. I was shocked by the
 4 weaknesses in the proposed plans. The DOE could not answer
 5 key questions about the outcome of the dumping and the
 answers they did have made it clear that the dumping was
 unhealthy for the residents of Washington + Oregon - putting us at
 risk for cancer. The tobacco companies have recently been sued for
 their failure to honestly warn smokers about the health risks of
 smoking. How much more outrageous is it that the DOE
 would put US citizens at risk? The representative from the
 E.P.A. told the audience that he did not think the E.I.S.
 explored all the options available - focusing more on cost
 than on the environment + people affected. Furthermore
 Sen. Wyden's representative presented a scathing critique
 of the proposed plan. Not one member of the audience
 voiced any support for the plan. I am
 adamantly opposed to the proposed dumping at Hanford.

This decision needs to be based less on money issues and more on what is healthy for our region. The LLW needs to be kept in lined burials. The cost-benefit analysis that DOE has done gives short shrift what is going to happen, or might happen, in the next 30 years.

We (I) am already sharing the roads with trucks carrying radioactive waste from sites in California and Idaho, etc.

Some of these trucks do not pass safety tests at state borders; some arrive at Hanford "hot."

~~As~~ As US DOE contractors they are exempt from state safety regulations.

I have a right to know if I'm driving next to a truck transporting this waste. ~~How~~ How do I know this?

1 I am completely opposed to the US DOE plan to ship
2 nuclear and radioactive wastes - low-level, mixed level and TRU -
3 to Hanford. Hanford, the most contaminated site in the
4 Western Hemisphere, already poses serious health threats to people
5 living downwind and downriver from Hanford. There has already
been years of radioactive seepage into groundwaters and the
Columbia River. As Hanford cannot handle the wastes it already
has, it needs to clean up, not take in more wastes. Also, it
makes no sense to put 70,000 truck loads of highly dangerous
materials on the roads, especially going thru urban areas
and on dangerous roads, i.e. the Turn of the Curve on I-5 and
the Blue Mountains I-84. The likelihood of accidents is high
especially as the trucks already delivering to Hanford show a
dangerous rate of inadequate maintenance. I read of truck
accidents all the time. This plan shows an alarming
indifference to well-being of people and the environment.
It should be abandoned forever.

1 No to bringing in planned shipments of radioactive
waste to Hanford!!! It is outrageous & a complete
disrespect of the people of the Northwest to want
to dump 70,000 truckloads or any to Hanford.
 2 The Result is Terror against our people - more
sickness, cancer, death! This is ignorant &
irresponsible. Hanford needs to be cleaned
up & its waste is already leaking into the
 3 Columbia River. The waste there is untreated.
The waste you propose to bring in is untreated.
There is NO scientific evidence of
the safety of such an operation.
 4 Are you mad? These trucks
would be driving down our highways &
freeways, next to cars & through our
neighborhoods everywhere. Plus the government's
secrecy about the project demonstrates a
complete lack of concern for democracy.

1 Here in Oregon, we identified the risks of nuclear energy & shut down Trojan reactor. The dangers and the lack of disposal methods that render ~~radioactive~~ ^{radioactive} material safe have been known for at least 30 years. ~~Merks~~ The federal government chose not to restrict generation of hazardous waste for military means - we refused ^{most of Portland, IL, ES, for} nuclear arms reduction ~~in~~ and nuclear power plants in other states continue to operate.

2 Now we have this mess to clean up. The Bush administration is bullying small states into ~~accepting~~ becoming dumping grounds. The DOE is playing a shell game, moving material all over the country. Already we have our major river contaminated.

3 Find a better way. Store it where it is generated. Quit making this stuff. Quit making bystanders pay - a public price for private profit in many cases.

Telephone: (503) 736-3598 E-Mail: milt@critfc.org

1 The Columbia River Inter-Tribal Fish Commission opposes the US DOE's proposal to transport & dump 70,000 truckloads of radioactive waste to Hanford. The Commission is charged with the protection & restoration of salmon & other fishery resources for our member tribes: the Nez Perce, Umatilla, Warm Springs & Yakama tribes.

2 In 1855 our member tribes exchanged by treaty w/ the federal govt. lands- including those which today comprise Hanford- in return for the right to retain their salmon-based cultural & spiritual values. Our tribes have honored their promises; the federal govt. has enjoyed use of Hanford without interference.

3 In return, the federal govt. has made Hanford the most radioactively contaminated site in the Western Hemisphere. Moreover, the govt's practices threaten the promises they made to our tribes. Our member tribes have had to cope w/ toxic spills into salmon-bearing watersheds that have affected the treaty fishing resources. Transporting this new volume of nuclear waste undoubtedly increases the risk of such accidents occurring in the future. (over)

3
(cont)

The health of the Columbia River and its watersheds — including Hanford — is essential to the tribes' and the region's salmon restoration efforts. For example, the fall chinook salmon run from the Hanford Reach is the most important fishery in the Columbia River Basin & supports important fisheries in Alaska. Importing this new volume of waste to Hanford could place this ~~secured~~ treaty-secured fishery in jeopardy.

I URGE THE USDE NOT TO TRANSPORT ANY MORE NUCLEAR WASTE TO THE HANFORD SITE. CONSIDERING THE CHALLENGE WE HAVE ALREADY TO CLEAN UP THE EXISTING MESS AT HANFORD IT WOULD NOT BE PRUDENT TO ADD TO THAT TASK. MAYBE AFTER THE CLEAN-UP PROJECT CURRENTLY UNDERWAY HAS MOVED CLOSER TO COMPLETION WOULD A CONSIDERATION TO MOVE MORE WASTE TO HANFORD BE POSSIBLE.

I have a series of questions I want answered:
1) Why is clean-up ~~already~~ needed at the Hanford site?
2) Why hasn't it been properly cleaned up yet?
3) Why aren't Hanford and other Superfund sites cleaned up yet?
4) Why would the representative of the DOE who spoke in Portland informed concerning already-existing contamination by high level radioactive waste at Hanford?
5) Why is radioactive waste being stored in an area prone to earthquakes with a great deal of rainfall each year?
6) Why is groundwater and the Columbia River already being polluted by Hanford?
7) Why has the Bush administration proposed more nuclear power as a solution to our energy needs when we can't handle the radioactive waste we already have?

1 I oppose the proposed transport of nuclear waste to the Hanford facility. The main focus of DOE should be on the decided clean up of the facility, not the addition of more waste.

2 Question: I would like an answer to the question of ~~what~~ how can it be proposed to transport 70,000 truckloads of nuclear waste to Hanford when there is a lot of research that proves the risks to population of hazardous waste when it is logical that the dumping will cause further contamination of the river, soils & nearby inhabitants and when it has been decided ~~to~~ in recent years to CLEAN UP and deactivate Hanford?

3 Question: I would like an answer to the question of what is the personal, business, familial or any other type of relationship ^{ship} between the trucking contractors who haul nuclear waste to those making DOE policy- decisions on this matter.
_{to who are} Thank you.

1 I have reviewed the Draft HSW EIS dated April 2002.
The document does not state why the DOE needs to expand storage management of anticipated volumes of low level, mid level and transuranic waste. Why does the DOE need to do this? What are the reasons? In particular reference to page 1.3 of this summary, at lines 18-21, I want to know in quantified terms what "anticipated volumes" means. If volumes are "anticipated", the DOE must know quantities and I want to know these figures.

2 Regarding the transportation of these "anticipated volumes" I want to know why transfer of any nuclear waste to Hanford needs to occur. Referring to line 27 on page 5.18 of The EIS, how did the DOE determine that "transportation of waste was determined to result in four fatalities?" What does that mean? Fatalities of whom, when, how? Isn't it likely that fatalities of transporting ^{nuclear} waste could be 40,000, 40,000 or more depending on the nature of the accident. I oppose this proposal. I look forward to a response to my questions. Thank you - Judy Parsons

1 My husband, Dr. Norman Rickles, + I recently
 attended the DOE sponsored hearing on the
 Bush Administration's proposal to dump another
 20 million cubic feet of nuclear waste, ship-
 ped from other nuclear sites, at Hanford.
 What a lousy idea _____ we are
 spending billions of dollars on clean-up,
 at Hanford at one end, as we ship in
 more waste at the other. If the conse-
 quences weren't so potentially tragic, it
 would be a joke.
 2 And transporting by truck? Ever heard of
 the Terwilliger Curves - not just an
 accident waiting to happen, but one that
 happens regularly. For now stop moving
 waste & look for safe ways to store!
 Please!

1 I am writing out of my grave concern with the US Dept of
2 Energy's EIS. Some of the reasons are that it proposes:
3 - transporting nearly 70,000 truckloads of radioactive waste
4 along our highways; dumping contaminated waste into unlined
5 trenches; doubling the risk of soil and groundwater contamination;
6 storing waste that contains deadly plutonium; almost assuredly
contaminating groundwater flowing toward the Columbia River.
But beyond the specifics of the proposal lies the real issue, the
moral issue of such irresponsible management practices.
At the heart of almost all faiths is the concept that humans
are called to care for Creation, be responsible stewards of this
great gift of life, in all its diversity. The Book of Genesis opens
the Bible with the story of creation. Rabbinic tradition says that
God warned Adam by saying: "See my world, how beautiful
it is. See to it that you do not spoil or destroy My World -
for if you do, there will be no one to repair it after you."

Unfortunately, management practices of the Department of Energy for Hanford Nuclear Reservation have not reflected the commonly held value of stewardship nor heeded the above warning.

6 From the perspective of my tradition, the Jewish tradition, the value of preserving life and not engaging in destructive acts is clear and profound in the laws of Baal Tashchit, which mandate that we do not destroy or waste.

Our request, and the request of the public is fundamentally basic, and it's one that stems both from logic, ethics and humanity. The Columbia River

7 is one of our regions most valuable natural resources. We have made atrocious and unconscionable mistakes in the past. It is now our moral duty to repair our mistakes as we are able. We urge you to redo your analysis. Stop more waste to the Hanford Nuclear Reservation and clean up the existing radioactive mess.

9 The decision lies partly in your hands and frankly in the hands of our politicians. And in this decision rests not only the fate of all us - but the fate of future generations and of creation.

1 I urge the DOE to halt any
2 idea to ship more waste to
Hanford. It is imperative to
3 clean up the waste that is
already accumulated at the
site, and not contaminate
further. The representative from
the DOE admitted that the
proposal to store more waste at
Hanford was not beneficial
to residents in the Northwest.
4 I also urge you to reconsider
any more nuclear development -
for energy use or weapons. Doing
so is obviously posing a threat to
our environment, and our health,
and our survival on this planet.

1 Thank you for holding meetings in Oregon
Addressing radioactive waste "disposal/
storage" is vexing - several years ago there
was a call for a comprehensive DOE review
of comprehensive, co-ordinated NATIONWIDE
PLAN.

2 In general I am not opposed to consolidation
of like wastes in a location where they can
be treated & stored safely. HOWEVER
RISK assessment must be made on all
containers, transport & storage aspects.
3 Moreover I believe NO MORE WASTE
should come until adequate money
is forthcoming and assured for
K Basin, TANK & groundwater
contamination issues.

4 Hanford mission is clean up & the
site waste should be dealt with before
OFF site waste is allowed

1 | Clean up the mess we already have!!!

2 | No more waste brought in.

3 | DOE does not respect the citizens of the Northwest, which is obvious from the manner in which, first, the restart of the FFTF reactor was forced on us and second, additional neolog waste is being dumped on us. Fortunately the FFTF reactor idea was finally discarded. NOW DISCARD THE IDEA OF BRINGING IN MORE HAZARDOUS WASTE.

4 | I support the idea of shipping this stuff to Crawford, Texas!!! I Bush deserves to have it in his back yard.

1 Dear Sir:

2 I attended the 30 July 2002 meeting at
 Portland's Metro Building.

3 I am sorry to learn that this
 shipping of radioactive waste from
 other sites to Hanford, to be buried
 in trenches without even a protective
 liner, is already a "done deal".

It is hard to believe that the Dept of
 Energy has done the type of analysis
 it should have done, and to still declare
 that this move is a "done deal". It cannot
 have taken into account the difficulty of
 winter travel on snowy mountain passes.
 Why should this waste be shipped to
 Hanford at all? The risks are so great.

Sincerely, Sally Streeter

Hanford needs to be cleared up,
not made more dangerous. No more
waste should be stored at Hanford
before everything is cleaned up!
Please keep our children safe
by focusing only on clean up.
I dream of the day my child
could safely play in Columbia
water.
Thank you.

1 By this date, August 21, 2002, DOE
2 has not taken seriously either
3 Congressional or general public
4 "advise + consent" roles. One thing
is clear from public mood during
hearings, + that is, that the
shipments will not happen, because
the people will not allow it. Stop
producing the junk, okay? + keep
it where it is. The people have
spoken. Now follow thru. The
people rule + shout out clearly:
"No!"

1 I am strongly opposed ^{and horrified at the idea of} to shipping any more nuclear waste to Hanford. 70,000 chances for accidents or terrorist attacks makes a spill a probability, not just a possibility.

2 I am equally opposed to storing any more waste nuclear at Hanford; especially in the manner described. We need to clean up what is already there. !!!

i.e. undisturbed contamination

3
4 The DOE is abdicating their ^{moral} responsibility ~~to~~ ~~to~~ the health of the people they supposedly serve. ~~to~~ There is already contamination ^{from} the Hanford site; how can you think of being able to contain more!? I don't trust the DOE's EIS projections - it leaves too many questions unanswered. ~~Who~~ Did the DOE's geologists rate the area "moderate" and did they only look at the last 300 recorded years or did they include the ~~proof~~ evidence that a Richter scale 8-9 earthquake is predicted in the next 100-200 years?

Request: Full EIS (includes summary) Summary EIS Electronic EIS (CD)

~~and~~ Please stop creating nuclear waste from weapons and energy. If not, please consider Pres. Bush's ranch as a nuclear waste site.

I am all for shipping nuclear waste on America's highways, as long as it gets buried in unlined trenches on the front lawn of Mr. Bush's White House! Maybe the administration will think a little harder about how and where they want to "dispose" of this garbage!

This is another ridiculous plan by rich, white men who care nothing about the people of this country, only about their rich, white friends w/influence!

1 Yes, this plan does not seem completely thought out. I have read the EIS and am astounded that the DOE believes that dumping radioactive waste in trenches (lined or unlined) is a responsible way to "dispose" of it. This is not disposal, but merely is "putting it away." We will feel the repercussions of this for years to come. You (DOE) do not have adequate information regarding long term effects. Just look at the magnitude of problems from the last 50 yrs. This is very short sighted and narrowminded. Do you not care who dies for your sins.

3 I suggest leaving it where it is until something reasonable can be thought of.

1 Under 'Environmental Consequences' please provide in-depth
 information on the effects of LLW leachings to species living in
 the Columbia River Area. Even if levels of exposure are not harmful
 2 to human health, the salmon of the Columbia River are
 extremely chemically contaminated, and send those contaminants
 up the food chain. To tribal members, the salmon are an
 3 essential part of their culture and their diet, and tribal children
 who consume Columbia River Salmon face a cancer/immune disease
 risk 100x greater than non-tribal children.

4 Continuing to dump waste in unlined trenches, in which
 that waste is capable of infiltrating the groundwater and the Columbia
 River, demonstrates a careless attitude towards the health and
 livelihood of tribal people and the survival of endangered species.

5 If we can't currently control this waste, why are
 we considering accepting more? Burying LLW in a giant catbox is
 6 Not cleanup. Hanford cannot afford to prioritize outside waste disposal
 and displace cleanup.

1 It is of great concern that the contamination of ground water
2 flowing into the Columbia is not being addressed with the current
3 waste that is already at Hanford. ^{EN 3/7/02} This Many of the current
4 wastes are already in violation of both federal and state
5 regulations. All this and there is additional thought to
6 continue to violate regulation and more importantly, violate
the environment and our future generations by bringing even
more uncontrolled waste to this sight. Uncontrolled in
that there is intention to put it into open, unlined pits.
Please pursue doing a more effective EIS that will affect
many generations to come. Our investments of today are
the future quality of life for generations to come.
Additionally the idea of pouring concrete into many of the water
tanks is clearly an uncontrolled way to try and lock the
radiation into place.

Michael Collins ATTN: HSW EIS

1 The draft Hanford Site Solid (Radioactive and Hazardous) Waste Program Environmental Impact Statement (HSW EIS) does not really address many things, but specifically the following three issues:

2 1) the toxic seepage into the watertable from past toxic waste dumping or future dumpings (especially and specifically) in unlined trenches,

3 2) characterization of past and future waste, and

4 3) future harm to future generations of humans and animals and plants and all present and future life on earth for thousands of decades and maybe even more.

5 In conclusion, I don't think this draft HSW EIS adequately addresses the above mentioned three issues, and not to mention the problems raised by our current war on terrorism. Thank you for reading and taking into consideration my comments above. Dave P. Ayotte

1 No waste should be added to the mess already made in Hanford. The public, state, congress has worked hard for years to deal with what is already there; and now that seems to be thrown out the window.

2 We want no level of danger what is currently there. Needs to be disposed of 1st.

3 please, no transport or add waste to Hanford WA

Sincerely, Holly Conley

1 This plan sounds amazingly
irresponsible. The transportation issues
alone are terrifying. Have you done
2 studies on Washington State traffic? It's
awful and people are insane. You already
take your life in your hands. Now you
want to add nuclear waste into the
mix?

3 Also, I think that taking some of the
most deadly materials in the world +
putting them in big dirt holes is
a very very bad idea.

4 P.S - Why do you always make it
so confusing to sign in + give
public comments?

PPS - Your Q+A and Presentations always go

1 My name is Joslyn Gujarro. I live in New York City and I love visiting Washington State. The Pacific Northwest is amazing and beautiful but also extremely contaminated by Hanford.

2 I am so angry at the Department of Energy because their plan to bring more radioactive waste to Hanford will have horrible long term effects on the environment. The Department of Energy has tried
 3 burying nuclear waste in unlined trenches before and it is leaking into the groundwater. They must
 4 take the environmental and human health considerations into account.

5 I wish that we could actually see the contamination in the Columbia River so more people would realize how radioactively polluted it is

If the D.O.E. believes they have presented an EIS statement of honest integrity, the department is either:

1

1. Lacking in knowledge (stupid)

2. Dishonest (Has an unwritten agenda)

2

In either case the tragic result is the loss of human life, ill health for thousands & thousands of years of contamination of the earth.

3

The citizens do not want you to add waste until you clean up what is there!

4

I think most of those in decision making positions know what is right. They choose not to do it for selfish reasons of personal nature. What a shame to be part of a plan to terrorize our own citizens. What is the difference between killing people through poisoning water and air or dropping a bomb? It's only a matter of degree.

When will Hanford Clean-up be completed according to state requirements? It's insane to add more dangerous nuclear waste to an already horrible and toxic wasteland like Hanford. What exactly is in these burial grounds? Underground water must be monitored. All burial grounds should be lined and capped. Do not add any more nuclear waste until Hanford is in compliance with law. Stop allowing illegal dumping in these burial grounds. There should be a full scale investigation of Hanford and if it's found to be impacting the environment and our public health the state of Washington should sue Hanford and the Dept. of Energy. What a disgrace that Hanford in our beautiful state of Washington is the most contaminated site in the Western Hemisphere.

1 Fact: There are at least 57 known tanks leaking nuclear waste into the soil. Waste you were supposed to clean up & dispose of per the Tri-Party Agreement. Fact: You are in violation of numerous hazardous waste laws.

2 Fact: You can not handle the waste already created & stored at Hanford. Now you are proposing bringing in more? More waste dumped into unlined trenches. Your proposals are shoddy and pathetic. It is obvious the DOE is ill equipped to handle the waste. You are not fooling anybody

Please accept this as our views on the HSW-EIS

- 1 ① We believe the EIS was incomplete and tried to skirt
around the unlined trench problem & the other controversies.
- 2 ② We think that vitrification stands the best chance of holding
up for perhaps thousands of years.
- 3 ③ We think too much nuclear waste from outside Hanford is
being planned to be brought there. Therefore we would ask that
a much smaller amount be brought - and only very low level.
- 4 ④ We believe that Yucca MTW is probably a safer site for much
of the nuclear waste when it is all carefully characterized,
as to high-low-tox etc for best storage.
- 5 ⑤ We think the plumes of radioactive materials nearest the river
should be cleaned up first and no future dumps be placed
anywhere near the river - as far away as possible.
- 6 If DOE does not take a responsible role in this
mess there will be a political hornet's nest of protest
eventually if not immediately.

1 The public comment period is a chance to include the
 2 public in decisions made that will effect the whole
 3 of the Northwest and the greater portion of the
 4 United States. Now as a concerned citizen I am asking
 5 you to listen to the public. Do not send this waste
 6 to Hanford. Repeatedly the DOE has shown that
 7 they are unable to deal with the massive amounts
 of waste that already exists at Hanford. Do not
 send 70,000 additional truck loads of waste, do
 not put the citizens of the Northwest at risk,
 do not tamper with the Columbia River
 and enhance chances of contamination. Clean-up
 Hanford. It is time for the DOE to put all of their
 efforts into clean-up. It is time to protect the
 people of the Northwest and all the people in
 the nation.

1 This is one more example of the secret
 government within the government. It is all about
 2 only to corporations and the maximizing of
 profits and to pass the cost to the citizens
 who still pay taxes. The degradation of the
 environment so that the illnesses and
 cancers will cost these unprotected ~~masses~~
 3 people their health and their ~~wealth~~
 wealth. This sends the flow of money into
 the ~~hands~~ for profit health care systems.
 Our society has become the snake
 that is eating its own tail. It is a
 Suicide System.

Last week the newspapers have had big articles about how Agriculture is the \heartsuit of our states' economy and export industries. Yet, this EIS does not clean up the main water source of producing and transporting those crops. DOE & DOD are terrorizing our economy by their irresponsible creation of new weapons and waste and not keeping their legal contract to clean up Hanford according to international standards. Check with the IAEA not the corporation that will even tell the truth about the \$'s let alone the nuclear chemicals.
