

Table 4-7. Air pollutant emissions from K-Area steam plant and from sources supporting L-Reactor operation

Pollutant	Annual emissions <sup>a</sup> K-Area steam plant (metric tons/yr)	Incremented annual emissions <sup>b</sup> projected 1984 to support additional steam to L-Reactor (metric tons/yr)	Annual emissions <sup>c</sup> diesel generators at L-Reactor area (metric tons/yr)
Particulate matter	187	28	4
Sulfur oxides	870	130	4
Nitrogen oxides	345	52	59
Carbon monoxides	46	7	
Volatile organic compounds	23	4	

<sup>a</sup>Based on present coal consumptions of 46,400 metric tons per year.

<sup>b</sup>Based on 6400 metric tons per year coal consumption.

<sup>c</sup>Based on burning 940 cubic meters diesel per year.
